

Jasmin Skenderi

Chief Technology Officer | Hardware-Software Products · Industrial IoT · AI in Engineering

Berlin, Germany
jasmin.skenderi@gmail.com | linkedin/in/jskenderi | www.skenderi.me

Profile

Dipl.-Ing. Electrical Engineering with 20+ years building products where hardware and software meet — aerospace and military electronics, connected hardware, Industrial IoT. A decade in C-level roles: CTO and Executive Board Member at an IoT venture studio with ~20 portfolio companies, then CTO and Managing Director at Cybus. I have never shipped pure software — everything I have delivered ran on hardware we built ourselves. Currently working daily with LLMs and agentic systems, having rolled AI-assisted development out across an entire engineering organization.

Selected Results

Organization	Engineering grown from 6 to 24 across five led teams, plus a six-person product organization — 30 people in total
Retention	0% voluntary turnover across the engineering organization throughout tenure
Scale	Platform throughput increased roughly 100×, to over a billion messages per hour
Reliability	One production incident every two weeks → zero across six months
Delivery	QA cycle reduced from three days to four hours through full automation
AI adoption	24 of 24 engineers working with AI-assisted development daily

Core Competencies

Leadership	Leading through team leads · building and scaling engineering organizations · organizational design and hiring · stakeholder management across engineering, product and customers · executive, board and shareholder communication · funding and budget responsibility
Product & Delivery	Roadmap ownership · outcome-driven planning · QA and release engineering · incident management · ISO 27001 and TISAX ownership
Technology	Distributed and event-driven architectures · Kubernetes, AWS, Docker, CI/CD · embedded Linux · hardware-software co-design · security-by-design · industrial protocols (OPC-UA, Modbus, BACnet, S7, MQTT)
AI in engineering	Team-wide adoption of AI-assisted development · custom agents and skills for engineering workflows · governance for production-critical code · LLM, RAG, agentic systems
Methods	Scrum, Kanban, OKRs, PRINCE2, V-model, DO-254, ISO 27001, TISAX

Professional Experience

Chief Technology Officer - Managing Director | Cybus GmbH, Hamburg Sep 2022 – Present
Industrial IoT company (~60 employees) building Connectware, an enterprise-grade Factory Data Hub for industrial data.

- Grew engineering from 6 to 24 people across five led teams and built a six-person product organization including a VP Product — 30 people in total.
- Re-architected the platform's control plane, increasing throughput roughly 100× to over a billion messages per hour.
- Took production incidents from one every two weeks to zero over six months through an ISO 27001-certified, externally audited incident process; cut the QA cycle from three days to four hours.
- Introduced AI-assisted development across the whole engineering organization, with reliability and maintainability of production-critical code as the binding constraint.

- Scaled Connectware from early-stage to enterprise-grade, running production-critical at Porsche, Miele, Liebherr, Krone and CLAAS.
- Owned product management and roadmap steering; participated in funding rounds and shareholder communications.

Chief Technology Officer - Executive Board Member | Next Big Thing AG, Berlin Oct 2016 – Aug 2022
IoT venture studio – investor, accelerator, and technology provider for deep-tech startups.

- Owned technology strategy across NBT and ~20 portfolio companies, with operational, disciplinary and budget responsibility.
- Led development of Prometheus, the shared hardware and software platform built with Nordic Semiconductor and used as the production-ready base for portfolio products.
- Co-founded and built ventures across HealthTech, chip design, PropTech, energy management, blockchain, secure hardware, cold chain management and industrial asset management — including Sensry, whose Ganymed platform is a 9-core RISC-V SoC built on GlobalFoundries' 22FDX process.

Director of Hardware Development | KIWI.KI GmbH, Berlin Oct 2015 – Sep 2016
Keyless door entry systems.

- Disciplinary and professional responsibility for hardware development and embedded systems, reporting directly to the Executive Committee; owned hardware and embedded architecture, development and manufacturing processes, and supplier coordination.

Head of Hardware Development | yetu AG, Berlin Apr 2014 – Sep 2015
Universal smart home platform spanning smart home, audio/video streaming, and video services.

- Managed all hardware activities and architecture with budget responsibility; drove strategy, product certification (CE, FCC) and market entry.

Hardware Designer | alpha-board GmbH, Berlin Nov 2006 – Apr 2014
Electronics Development and Manufacturing for aerospace, military and industrial clients.

- Led the hardware development department — hardware architectures, research projects and PCB manufacturing under DO-254 and V-model process discipline. Designed a standalone HD-voice IP desk terminal for Swyx.

Hardware Engineer | Digicast OHG, Berlin Jan 2006 – Oct 2006
Project Engineer | Energoinvest d.d., Sarajevo Mar 2004 – Dec 2004

Additional Experience and Board Roles

Chairman of the Advisory Board | ConcR GmbH, Berlin Dec 2019 – Jun 2022
Chief Executive Officer | Pretoria Research Lab GmbH, Berlin May 2021 – Jun 2022
Managing Director | Deflect GmbH, Berlin Mar 2021 – Jun 2022

Education and Certifications

Dipl.-Ing. Electrical Engineering | University of Sarajevo - Electrical Engineering Oct 1999 – Mar 2004

PRINCE2 Foundation & Practitioner, certified Project Manager | APM Group, Berlin Oct 2013
Certified ScrumMaster (CSM) | Scrum Alliance – Agile42, Berlin Nov 2013
